Cleaned Soles – by active cleaning

CleanGate®

- Absolut maintenance free
- Active cleaning by contra-rotating brushes
- Heavy duty without passenger limit
- Usable for shopping carts wheelchairs and stiletto

„Clean

In former times attractive entrance areas and high valued premises had been unprotected against contamination because of the big quantity of visitors and therewith these facilities had been worn out within a short time. High costs for cleaning and maintenance occurred, which can be considerably reduced by means of using a CleanGate®. Contamination, which is taken to the areas by the visitors, can be cleaned properly.

From the first view the CleanGate® looks like a normal mat, but it is installed to the floor. Because of its contra-rotating brushes the CleanGate® provides a most intensive cleaning, which is also known from the industry. Similar equipments we are producing for the industry purpose since many years now.

www.heute-gmbh.de/uk/industry

This moving mat avoids wear of the high valued floor covering, p.e. the contamination of carpets or the scratching of marble. But in one point the CleanGate® can be compared with its old fashioned, passive predecessor:

The CleanGate® is as maintenance free as a foot mat !!!

CleanGate®

The fixed felt stripes collect the
wetness of the soles.

The non-skid grating out of stainless
steel permits the passing by baggage
cars, shopping cars, wheelchairs,
and with stilettoes.

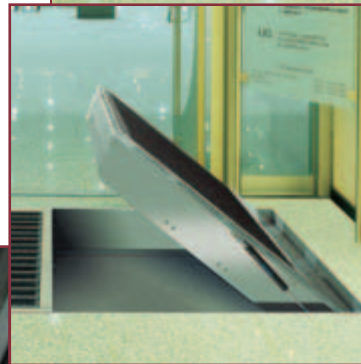

CleanGate®

Keep entrance areas clean automatically

CleanGate® is suitable for all gateways, where many people are moving from one point to the other, such as shopping centers, airports, administration buildings, offices. While passing the cleaning mat the soles of visitors, customers and guests will be cleaned properly and automatically. The patented protected gear system guarantees, that the moving of the brushes will not be disturbed in case of a contamination.

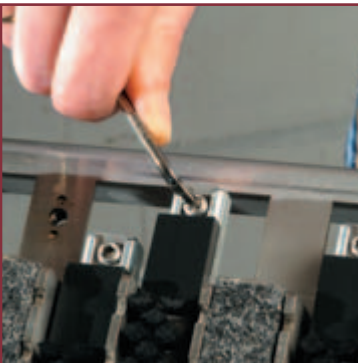

Since nearly 100 years now the name "HEUTE" represents Innovation and Quality, in particular because of our shoe shine machines, which can be found in hotels worldwide. Furthermore our HEUTE cleaning units for the industry provide a continuous and dirtless production cycle at many wellknown companies. The detailed construction of our machines and intensive tests of all components are the base for the reliable daily use.

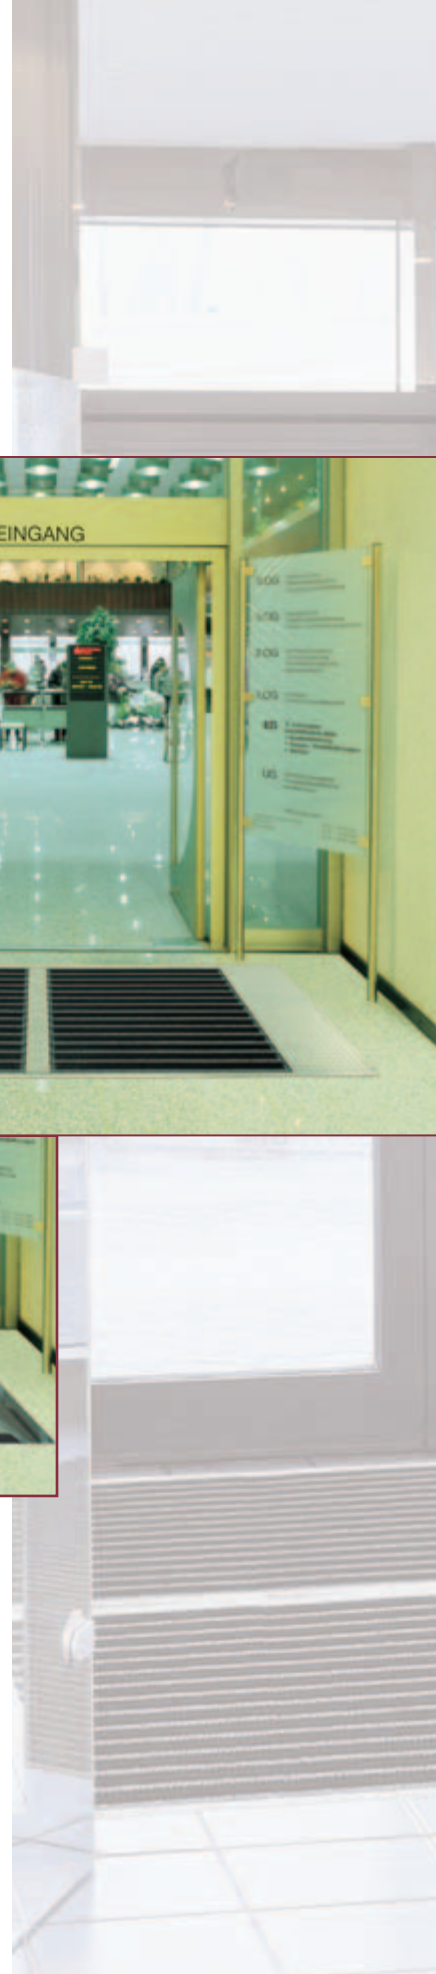

The equipment, which is running very silent, can be opened by means of tension springs very easily.

The equipment is **maintenance free**, because the gear is separated from the dirty area.

A possible changement of the brushes- or felt stripes can be carried out **by one person within some minutes only**.

Technical Datas

Measurement of the hole:	1.430 mm width x 1.200 mm length x 320 mm depth
Frame:	The frame is belonging to the equipment. (This frame will be delivered first, before the equipment). There-with the height can be adjusted according to the floor covering.
Cleaning area:	975 mm width x 1.080 mm length
Net-Weight:	approx. 300 kg
Max. loading capacity:	300 kg unlimited number of persons
Connection value:	400 Volt/16 A
Brush strips:	approx. 280 movements /min

The **wordings for tenders** for the different floor holes can be either downloaded as "Word Data File" via <http://www.heute-gmbh.de/download> or requested by e-mail through the Architects/Planning Managers.

HEUTE-Shoe- and Sole Cleaning Units

A.&W. HEUTE was founded in 1905. In 1945 the first shoe polishing machine for hotel use was built and not long afterwards came into series production.

Today the production range is very varied, ranging from practical shoe shine machines for hotels and the administration to passable cleaning equipments for the industry. Sole-cleaning systems and hygiene-channels round off the production programme.

The family trust, which is soon to celebrate its 100th anniversary, owes its expansion world-wide to the fact that at all times it has produced products of high quality which are very individual and customer-oriented. Our production and our experience in the area of shoe and sole-cleaning enable us to meet almost every requirement and solve almost all customer-specific problems.
